

QA TESTER — PRACTICAL ASSIGNMENT

Website to Test

opensource-demo.orangehrmlive.com

Login Credentials

Username: admin

Password: admin123

Deadline

48 Hours from date of receipt

Modules to Test

PIM | Leave | Login Page

Mode: Individual / Solo

1. Overview

You are assigned to test the OrangeHRM Demo — a real enterprise HR web application. Your job is to act as a QA tester, find bugs, document them properly, and write a test summary. This is a black-box testing exercise — you will not have access to any source code.

Note: This is an open demo application. The data may reset periodically. If you cannot log in, wait a few minutes and try again. Do not change the Admin password.

2. Scope — Modules You Must Test

You will ONLY test the following 3 modules. Do not spend time on other parts of the application.

#	Module	Where to Find It
1	Login Page	The first screen — before you log in. URL: /auth/login
2	PIM — Add Employee	After login: click 'PIM' in left nav > 'Add Employee' button
3	Leave — Apply Leave	After login: click 'Leave' in left nav > 'Apply' in left submenu

TASK 1 — Write & Execute Test Cases

What you need to do

Write minimum 15 test cases across the 3 modules above. Then execute each one and record the result.

Rules for each test case

- Every test case must have: TC ID, Module, Test Scenario, Steps (numbered), Expected Result, Actual Result, and Status (Pass/Fail).

- TC ID format: TC_001, TC_002, etc.
- Do not write vague scenarios like 'Test the login'. Be specific: 'Login with blank password field'.
- Cover at least 5 TCs for PIM, 5 for Leave, and 3 for Login.
- Minimum 2 TCs must be negative test cases (invalid inputs, wrong data, boundary values).

Sample test case table — fill this out for all 15+

TC ID	Test Scenario	Steps	Expected Result	Actual Result	Status
TC_001	Login with valid credentials	1. Go to site 2. Enter admin/admin123 3. Click Login	Dashboard should load		
TC_002	Login with blank password	1. Enter username 2. Leave password blank 3. Click Login	Error: Required field		
TC_003	Add employee - name with numbers	1. Go to PIM > Add 2. Enter '123' as first name 3. Save	Validation error shown		

Tip: Think about WHAT the field should accept and what it should REJECT. A name field should not accept numbers. A date range should not allow end date before start date.

TASK 2 — Find & Report Bugs

What you need to do

Find minimum 5 real bugs in the 3 modules. For each bug, fill in the Bug Report Template below completely.

Where to look — hints

- PIM > Add Employee: Try entering numbers in the First Name field. Try entering letters in the Phone Number field.
- Leave > Apply: Set the 'To Date' earlier than the 'From Date'. Try submitting. Does it accept it?
- Login Page: Click 'Forgot Password'. Does the email actually arrive? Is there any feedback message?
- PIM: Try saving an employee with a very long name (50+ characters). What happens?
- Any form: Try copy-pasting a special character like © or ₹ into a text field.

Priority vs Severity — you MUST understand this

Priority — How URGENTLY should this be fixed?	Severity — How BAD is the impact on the app?
P1 = Fix today. P2 = Fix this week. P3 = Fix in next sprint. P4 = Nice to have.	Critical = App crashes. Major = Feature broken. Minor = Wrong behavior. Trivial = Cosmetic.
<i>Example: A spelling mistake on the homepage is LOW severity but HIGH priority if the CEO's name is wrong before a big launch.</i>	<i>Example: A crash in a rarely used admin feature is HIGH severity but LOW priority since few users hit it.</i>

Bug overview summary table

Bug ID	Description	Module	Severity	Priority
BUG_001	Phone number field accepts alphabets	PIM	Major	P2
BUG_002	First name accepts numeric input '123'	PIM	Major	P2
BUG_003	Leave 'To' date before 'From' date accepted	Leave	Critical	P1
BUG_004	Session timeout shows blank page	Admin	Minor	P3
BUG_005	Forgot Password link non-functional	Login	Minor	P3

Bug report template — fill one for each bug

Copy this template 5 times in your submission, one per bug found.

Bug ID	<i>BUG_XXX (e.g. BUG_001)</i>
Title	<i>Short description of the bug (e.g. Phone field accepts alphabets)</i>
Module	<i>Which module: PIM / Leave / Login / Admin</i>
Environment	<i>Browser name + version, OS (e.g. Chrome 122, Windows 11)</i>
Priority	<i>P1 / P2 / P3 / P4 (P1 = highest)</i>
Severity	<i>Critical / Major / Minor / Trivial</i>
Preconditions	<i>What must be set up before testing (e.g. Logged in as Admin)</i>
Steps to Reproduce	<i>Numbered steps — be exact, assume the reader has never used the app</i>
Expected Result	<i>What SHOULD happen if the app worked correctly</i>
Actual Result	<i>What ACTUALLY happened — describe exactly what you saw</i>
Screenshot	<i>Paste screenshot here or write the filename</i>
Suggested Fix	<i>Your hypothesis — what do you think needs to be fixed in the app?</i>

TASK 3 — Test Summary

What you need to do

After completing Tasks 1 and 2, write a short Test Summary Report answering the following questions:

- Total test cases written: ____
- Total test cases passed: ____
- Total test cases failed: ____
- Total bugs found: ____
- Which module had the most bugs? Why do you think that is?
- Is this application ready for release? Write 2-3 sentences justifying your answer.

Important: A go/no-go decision is not just about counting bugs. Think about which bugs affect real users the most. A wrong date validation in Leave can affect an employee's payroll — that is more serious than a cosmetic alignment issue.

3. What to Submit

#	File	Contents
1	TC_Sheet.xlsx	All 15+ test cases with actual results and pass/fail status
2	Bug_Report.docx	5 filled bug report templates with screenshots
3	Test_Summary.docx	Answers to Task 3 questions — go/no-go decision

4. How You Will Be Evaluated

Criteria	Marks	What we look for
Test case quality & coverage	25	Are edge cases covered? Are steps clear and precise?
Bug report completeness	30	Are all 12 fields filled? Are steps reproducible?
Priority & Severity accuracy	20	Are the values logically justified?
Test summary & go/no-go decision	15	Is the reasoning sound, not just a count of bugs?
Documentation & formatting	10	Is the submission clean, consistent, and professional?

Good luck. Test like a real user, not like someone filling a checklist.
